## 1 Introduction

## 1.1 Revision History

### 1.2 Purpose and Scope

This document describes the Integration Test Plan for the myTaxiService application. It provides a plan referring to how the various components described in the Design Document will be integrated for testing.

#### 1.3 List of Definitions and Abbreviations

- *UI:* User Interface.
- Database's stubs: Active Requests and Reservations' stub and Accounts' stub.
- UIs' stubs: ClientUI's stub and DriverUI's stub.

#### 1.4 List of Reference Documents

- The document with myTaxiService's description
- myTaxiService's RASD
- myTaxiService's Design Document

## 2 Integration Strategy

#### 2.1 Entry Criteria

Before the integration testing, each single module must have been tested to verify the correct functioning of its methods according to its specifications.

## 2.2 Elements to be Integrated

According to the Design Document, the components to be integrated are:

- Database:
  - Accounts
  - Active Reservations and Requests
- Web Server:
  - DBConnector
  - APIBackend
  - WebpageCreator

- NotificationModule
- HttpHandler
- UI:
  - ClientUI
  - DriverUI
  - AdminUI

## 2.3 Integration Testing Strategy

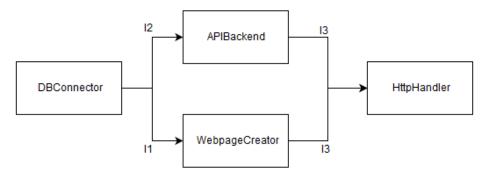

The decided testing approach is sandwich. This has been chosen in order to integrate first the components of the WebServer, and then integrate the WebServer with the Database and the UI.

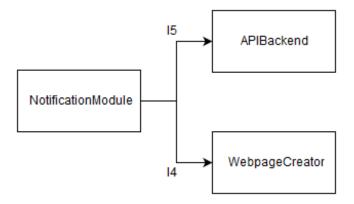

## 2.4 Sequence of Component/Function Integration

#### 2.4.1 Software Integration Sequence

In the following graphs the arrows go from the called module to the caller module and are marked with identifiers that define the order of integration.

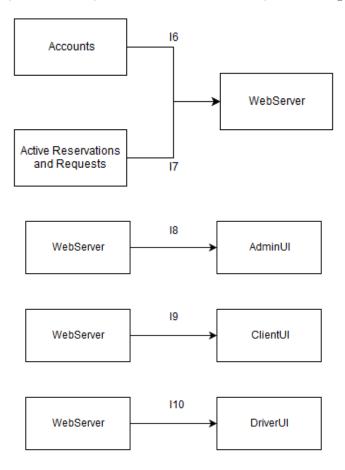

**2.4.1.1 Web Server** The following images describe how the Web Server's components will be integrated for testing.

## 2.4.2 Subsystem Integration Sequence

The following graphs describe how the three main components of myTaxiService application, the Database, the Web Server and the UIs, will be integrated.

# 3 Individual Steps and Test Description

## 3.1 Test case specifications

## 3.1.1 I1

Test Case identifier	I1T1			
Test Items	$DBConnector \rightarrow WebpageCreator$			
Input Specification	Perform valid and invalid requests on the Web-			
	Page Creator			
Output Specification	All and only the queries that should be allowed			
	are executed and the correct DBConnector's			
	methods are called			
Environmental Needs	Database's stub, WebpageCreator driver			
3.1.2 I2				
Test Case identifier	I2T1			
Test Items	$DBConnector \rightarrow APIBackend$			
Input Specification	Perform valid and invalid requests on the			
input specimenton	APIBackend			
Output Specification	All and only the queries that should be allowed			
o dop do specimenton	are executed and the correct DBConnector's			
	methods are called			
Environmental Needs	Database's stub, APIBackend driver			
3.1.3 I3				
Test Case identifier	I3T1			
Test Items	WebpageCreator $\rightarrow$ HttpHandler			
Input Specification	Perform valid and invalid requests on the			
• •	HttpHandler			
Output Specification	Verify if only the requests intended for the Web-			
• •	pageCreator are forwarded to it and the correct			
	WebpageCreator methods are called			
Environmental Needs	Database's stub, HttpHandler driver, I1,I2 suc-			
	cessful			
Test Case identifier	I3T2			
Test Items	$APIBackend \rightarrow HttpHandler$			
Input Specification	Perform valid and invalid requests on the			
- •	HttpHandler			
Output Specification	Verify if only the requests intended for the			
• •	APIBackend are forwarded to it and the correct			
	APIBacken methods are called			
Environmental Needs	Active Requests and Reservations' stub, Ac-			
	counts' stub, HttpHandler driver, I1,I2 success-			
	ful			

## 3.1.4 I4

0.1.4 14				
Test Case identifier	I4T1			
Test Items	NotificationModule $\rightarrow$ WebpageCreator All the possible types of input that require send-			
Input Specification				
- •	ing notifications to a client			
Output Specification	Check if the correct methods of the Notification-			
	Module have been called			
Environmental Needs	UIs' stub, WebpageCreator driver			
	, 1 0			
3.1.5 I5				
Test Case identifier	I5T1			
Test Items	$NotificationModule \rightarrow APIBackend$			
Input Specification	All the possible types of input that require send-			
	ing notifications to a client			
Output Specification	Check if the correct methods of the Notification-			
	Module have been called			
Environmental Needs	UIs' stub, APIBackend driver			
3.1.6 I6				
Test Case identifier	I6T1			
Test Items	$Accounts \rightarrow WebServer$			
Input Specification	Queries to manipulate (creation modification			
	and deletion) of accounts			
Output Specification	The correct Accounts' method have been called			
Environmental Needs	WebServer driver, Active Reservations and Re-			
	quests' stub, I1-15 successful			
3.1.7 I7				
Test Cose identifier	I7m1			
Test Items	I7T1			
Test Items	Active Reservations and Requests → WebServer			
Input Specification	Queries to place/accept/delete reservations and			
Output Specification	requests, in every possible order of execution			
Output Specification	The correct Active Reservations and Requests'			
Dung and Al No. 1	methods have been called			
Environmental Needs	WebServer driver, I1-I6 successful			
3.1.8 I8				
Test Case identifier	I8T1			
Test Items	WebServer $\rightarrow$ AdminUI			
Input Specification	Every possible input from the UI			
Output Specification	The correct WebServer's methods have been			
F	called			
Environmental Needs	I1-I7 successful			

#### 3.1.9 I9

3.1.9 19	
Test Case identifier Test Items Input Specification Output Specification Environmental Needs	$\begin{array}{c} \text{I9T1} \\ \text{WebServer} \rightarrow \text{ClientUI} \\ \text{Every possible input from the UI} \\ \text{The correct WebServer's methods have been called} \\ \text{I1-I7 successful} \end{array}$
3.1.10 I10	
Test Case identifier Test Items Input Specification Output Specification Environmental Needs	I10T1 WebServer $\rightarrow$ AdminUI Every possible input from the UI The correct WebServer's methods have been called I1-I7 successful
<ul><li>3.2 Integration Test Procedures</li><li>3.2.1 TP1</li></ul>	
Test Procedure Identifier Purpose Procedure Steps	TP1 This test procedure verifies whether the Web-Server's components work properly together with all kinds of inputs Execute I1-I5
3.2.2 TP2	
Test Procedure Identifier Purpose Procedure Steps	TP2 This test procedure verifies whether the Database can handle all types of inputs and modifications requested by the WebServer Execute I6-I7
3.2.3 TP3	
Test Procedure Identifier	TP3

# 4 Tools and Test Equipment Required

We base our tools' choice on the assumption that the implementation of the myTaxiService application has been made using Java as programming language.

As one of the most used and reliable testing frameworks currently available, we decided to exploit the functionalities of Mockito. In particular, it has been used to create all the stubs and the drivers named in Section 3.1.

## 5 Program Stubs and Test Data Required

### 5.1 Stubs

The required stubs are:

- Active Requests and Reservations' stub
- Accounts' stub
- ClientUI's stub
- DriverUI's stub

For the complete set of methods exposed by the interfaces of the modules listed above refer to the Design Document's section 2.6.

#### 5.1.1 Database' stub

This stubs should simulate a real database. They should provide responses for all the possible contents a database could have.

#### 5.1.2 UIs's stub

These stubs are used only in the NotificationModule's test. They have to mock the reception of messages from the WebServer.

#### 5.2 Drivers

As stated in Section 3.1, all tests except for I8-I10 need a driver. They are used to provide the inputs that should cover all the possible inputs the module could receive, where possible, and check the output for correctness.
